

Mortals & Gods - Build Your Own Pantheon!

Found a religion, raise altars, and earn boons from gods you design.

NeoForge 1.21.1 | modid **mortalsgods** | v1.0.1 | by Barunn (NewtL) | soft-deps: Pehkui, Iron's Spells, War 'n Nobility

LIVE ON CURSEFORGE

Mortals & Gods is a data-driven worship mod. Stack ore beneath an enchanting table to raise an Altar, wall it into a Sanctum, and open a full-screen worship UI to venerate a pantheon you control. Each opposed pair forces a choice, life or death, craft or magic, order or slaughter, and you may follow only one god of a pair at a time. Offer to your chosen gods and their boons grow along a saturating devotion curve, then fade if you neglect the faith. Mortals can ascend too: a living ruler (the Emperor) can be worshipped or hunted, his body swelling or shrinking with the realm's favor.

Nothing to craft, nothing to find. Out of the box the mod ships the Warborn Realms pantheon, art, and lore, so you can just play. You only touch the config folder if you want to build your own gods; a mistyped god is skipped with a log warning while the rest keep working.

The Altar

There are no crafted items. Worship happens at an Altar you build: an enchanting table standing on a 3x3 platform of ore blocks, enclosed inside a Sanctum.

O	O	O
O	O	O
O	O	O

Enchanting Table sits centered on top • O = any counted ore block (Copper, Iron, Gold, Emerald, Diamond, Netherite)

- **Arming:** all nine blocks under the table must be counted ore blocks, and the table must sit inside an enclosed room (the **Sanctum**). The Sanctum is detected by a flood-fill of open space; if it leaks outdoors (larger than 5000 air cells) it counts as open air and does not arm.
- **Altar tier (1 to 4)** is an offering multiplier, not a structure requirement. It is the total **value** of ore blocks adorning the temple: the 3x3 base plus every ore block bordering the Sanctum's open space (walls, floor, ceiling, pillars), each counted once. A richer, more golden temple worships harder.

Ore block values & tier thresholds

Block	Value
Copper Block	1
Iron Block	2
Gold Block	4
Emerald Block	6
Diamond Block	10
Netherite Block	24

Default tier thresholds (configurable): Tier 2 at value 32, Tier 3 at 96, Tier 4 at 256; below Tier 2 is Tier 1.

Controls

Action	How
Open the worship screen	Press B (default, "beseech") while standing in an armed Sanctum. Rebindable under Controls, category "Mortals & Gods".
Read a creed	Click a god's card to show its lore, devotion, favor, offering cost, and boons.
Choose a god	Click the choose button on a card (label may be a custom verb, e.g. "Bleed for Sanguinar").
Offer	Use the offer button to spend the god's currency and gain devotion.
Switch tabs	Click a bookmark at the top: Gods, Demi-Gods, any author-defined tabs, then Lore.

Action	How
Scroll	Mouse wheel scrolls a crowded god panel or the Lore tab.
Hide UI / camera	F1 hides the UI to watch your own kneel; F5 cycles the camera from inside the screen.

Opening the screen makes your character kneel at the altar; the kneel holds while the screen is open and ends on close (or death or logout). The pose is rendered by each viewer's own client, so only players who also run this mod see it.

Mechanics

Choosing a god

Gods sit in **groups** (opposed pairs) on bookmarked **tabs**. Within a group you may follow only one god at a time. Switching to the other god in a pair burns your old devotion to it (the opposites are jealous) and clears any charge pool tied to the abandoned god.

Offering and devotion

An offering at the Altar consumes the chosen god's currency, advances devotion by one step, and stamps a cooldown. The Altar tier is a multiplier: a Tier 3 altar consumes three times the currency but grants three devotion per offering. Currencies are **item** (hand over a stack), **xp** (spend levels), or **kill** (earned in combat against the rival faction, not offered at the altar).

Boons

Every boon grows on the same saturating curve:

$$strength = cap * (1 - e^{(-devotion / tau)})$$

cap = the ceiling • tau = grindiness (~63% of cap at devotion = tau, ~95% at 3 * tau)

Boon type	What cap means
max_health	Bonus max health (40 = +20 hearts)
auto_revive	Max stored totem-style revives (charge pool, refilled by offering)
durability	Bonus fraction of max durability on crafted gear (1.0 = +100%)

Boon type	What <code>cap</code> means
reach	Bonus reach; needs <code>params.attribute</code> (block or entity interaction range)
mana	Bonus mana, via the Iron's Spells bridge
war_stat	Max potion-effect amplifier; needs <code>params.effect</code> (e.g. strength, resistance)
favor_theft	Fraction of a victim's devotion stolen per kill (Demi-God war)
pehkui_scale	Max Pehkui scale bonus; needs <code>params.stat</code>
attribute	Generic: <code>params.attribute</code> = any attribute id, cap = bonus amount
scoreboard	Writes the current curve value into <code>params.objective</code> each second (auto-created, zeroed when dropped) for functions or KubeJS

Favor decay

Neglect a god past the grace period and its devotion bleeds off, processed per whole in-game day. War and Demi-God groups decay slower because their kill-currency is scarce.

Demi-Gods: the living Emperor

The Demi-Gods tab worships a living ruler. Net favor (loyalists' worship minus rejecters' devotion, across all players) scales the crowned player's body through Pehkui: hunt his loyalists hard enough and he shrinks until killable. The first god in a demigod group is the support side, the rest are reject sides. Power spreads evenly across Health, Strength, Speed, and Reach, each capped by config. Crown a player with `/mortalsgods emperor set` or list them in `demigodPlayers`.

Data-driven pantheon

The gods (names, lore, colors, currencies, boons, art) live in `config/mortalsgods/pantheon.json`, regenerated with the Warborn Realms defaults on first run alongside a README, an `images/` folder, and an optional `lore.txt`.

- **Custom tabs:** any `tab` id becomes a bookmark; a top-level `tabs` array sets order, labels, and gating. Lore is always last.
- **Exclusive tabs** (`"exclusive": true`): follow several gods within one exclusive tab, but not a second exclusive tab at once. `/mortalsgods renounce` releases those pledges to switch.
- **Access gates** (`"require": { ... }`): gate a tab, group, or god behind scoreboard tags and objective scores; failed entries are hidden server-side and cannot be worshipped by a modified client.

- **Custom pictures:** drop a 200x380 PNG into `config/mortalsgods/images/` named after a god's id, or point a god's `art` field at a filename. Read per-client.
- **Custom lore:** write `config/mortalsgods/lore.txt` (`#` lines are headings, others are paragraphs).

Configuration

File: `config/mortalsgods-common.toml` . The pantheon lives separately in `config/mortalsgods/pantheon.json` ; this file is only the global cadence and Demi-God rails.

[cadence]

Key	Default	What it does
<code>worshipCooldownDays</code>	1.0	Minimum in-game days between offerings to the same god.
<code>favorGraceDays</code>	3.0	In-game days a player can skip a Sanctum before favor starts decaying.
<code>favorDecayPerDay</code>	0.10	Fraction of accumulated devotion lost per day once past the grace period.
<code>warFavorDecayMultiplier</code>	0.25	Decay multiplier for War and Demi-God groups (scarce currency bleeds slower). 1.0 = same as others.

[altar]

Key	Default	What it does
<code>tier2Value</code>	32	Temple ore value needed for Altar Tier 2.
<code>tier3Value</code>	96	Temple ore value needed for Altar Tier 3.
<code>tier4Value</code>	256	Temple ore value needed for Altar Tier 4.
<code>sanctumAmbiance</code>	<code>true</code>	Fill a consecrated Sanctum with gentle holy light motes and a faint chime, denser at higher tier. False for none.

[demigod]

Key	Default	What it does
enableDemigodWar	true	Master switch for Demi-God worship, rejection, and favor theft.
demigodPlayers	[]	Player names who are always Demi-Gods; the first online one becomes the worshipped Emperor. Empty = command-set Emperor only.
emperorHealthScaleCap	2.0	Max Pehkui health-scale bonus at full net favor.
emperorStrengthScaleCap	1.5	Max Pehkui damage-scale bonus at full net favor.
emperorSpeedScaleCap	1.3	Max Pehkui motion-scale bonus at full net favor (kept low on purpose).
emperorReachScaleCap	1.5	Max Pehkui reach-scale bonus at full net favor.

Compatibility

All integrations are optional soft-deps, guarded at runtime; none are bundled or required.

- **Pehkui** — scales the living Emperor's body (and the `pehkui_scale` boon). Absent = Demi-God scaling no-ops.
- **Iron's Spells 'n Spellbooks** — backs the `mana` boon.
- **War 'n Nobility** — reserved hook for the live Emperor UUID (currently manual via command).

Commands

Command	Permission	Effect
/mortalsgods emperor set <player>	op (level 2)	Crown a player as the living Emperor.
/mortalsgods emperor clear	op (level 2)	Remove the current Emperor.
/mortalsgods emperor info	op (level 2)	Print the current Emperor's UUID.

Command	Permission	Effect
/mortalsgods reload	op (level 2)	Reload pantheon.json without a restart.
/mortalsgods renounce	all players	Release your pledges in every exclusive tab so you can follow another pantheon.

Building

```
. /gradlew build
```

Output jar in `build/libs/` (e.g. `mortalsgods-neoforge-1.0.1.jar`). Requires JDK 21. Optional integration APIs (Pehkui, Iron's Spells, War 'n Nobility) are not bundled; drop their jars into `libs/` to compile against the real APIs, otherwise the bridges fall back to reflection or no-ops.
